# IBM Fusion: Unlocking the power of your data

Computacenter and IBM ensure that your data is secure and swiftly accessible to drive innovation.
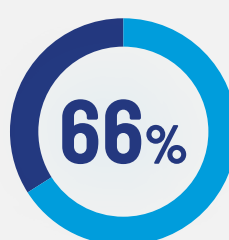

Higher data volumes demand smarter storage solutions to speed access to private and public cloud across the enterprise.
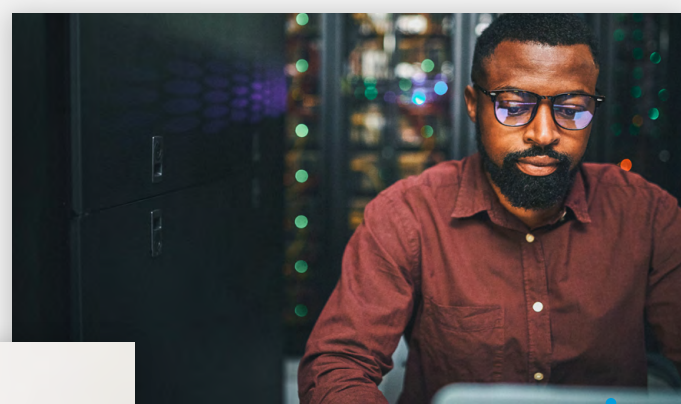

Together, we'll help you make the most of IBM Fusion.

85%

By 2025, 85 per cent of companies will have **containerized applications** in production.[1]

66%

It's predicted that by 2025, nearly 66 per cent of enterprises **will be prolific software producers** with code deployed daily, and that over 90% of new enterprise applications will be cloud native.[2]

That's why Red Hat® OpenShift® is vital: it enables you to scale to the cloud fast and run your applications on premise – all in one place. Computacenter will guide you through this complex process and help you make the most of cloud applications to really unlock the value in all that data.

IBM Fusion delivers seamless data access and management across your enterprise and cloud environments. IBM Fusion is designed to:

- Deliver a faster and lower cost path to leveraging the potential of AI and hybrid cloud
- Bridge the gap between applications and your storage platform
- Fuse your storage platform and services into a single application-aware storage architecture
