Intel® Technology Provider Platinum 2019 | Computacenter

A POWERFUL PARTNER FOR IT TRANSFORMATION

Resilient and cost-effective data management solutions for your hybrid IT landscape

RESPOND FASTER
TO DIGITAL CHANGE

For many organisations today, Intel® technology is a key component of their core IT infrastructure. Intel® Xeon® processors are designed for architecting next generation datacenters. As an Intel Platinum Partner, Computacenter brings a deep understanding of the Intel technology stack to our Digital Power solutions, enabling customers to respond faster and more efficiently to digital business change.

Who hasn't heard of Intel? With its iconic 'Intel inside' branding, the technology giant has established a leading foothold in the global IT market. But, as Intel explains, its business is about more than just the processors for which it is best known. Its wide range of products and solutions harness the capability of cloud, the ubiquity of the Internet of Things, the latest advances in memory and programmable solutions, and the promise of always-on 5G connectivity.

Computacenter excels at choosing the right Intel components from this diverse range to accelerate your business. We offer Intel-based products and solutions across mobility, hardware, software, security, manageability, remote administration of enterprise client devices, and cloud solutions.

Like Intel, we know that great technology can drive an enriched customer and user experience in a dynamic, responsive working environment. We use our blend of datacenter optimisation and cloud expertise in public, private or hybrid organisations and combine it with our in-depth knowledge of Intel's products and solutions to deliver that great experience.

Together, Computacenter and Intel are powering datacenter modernisation and the journey to multi-cloud. We will enable you to keep pace with rapid growth in significant IT industry trends, such as Big Data, AI and analytics. By working closely with Intel on a range of shared strategic and operational objectives, we can deliver the transformational business solutions you need to accelerate your business in today's digital landscape.

CONNECT, SECURE, ADOPT AND
ACCELERATE

Computacenter understands that great business outcomes are built on holistic hybrid IT infrastructures. That's why our Digital Power solutions seek out the optimal mix of technologies and cloud providers, enabling us to help companies select, deploy and operate the right cloud technologies for their hybrid IT.

Intel offers a number of products and solutions that can be part of a powerful IT infrastructure. At Computacenter, we don't just help you select from Intel's range of technology, we integrate into your IT estate, with a focus on specific outcomes:

- ACCELERATE DIGITAL BUSINESS
  Our application transformation solutions drive differentiation with big data, analytics, devops and containerisation. They can feature Intel advanced analytics, in-memory databases, and the revolutionary Intel Optane™ memory and storage solution.

  Intel® Xeon® processors are the foundation of today's Artificial Intelligence (AI), which promises to do more than just change the way we do business – it will touch every corner of society.

- ADOPT THE PUBLIC CLOUD
  Intel asks customers 'what's powering your cloud strategy?' and at Computacenter we frame, optimise and accelerate public cloud adoption using several Intel products. For example, Intel Xeon Scalable processors are workload-optimised to support hybrid cloud infrastructures.
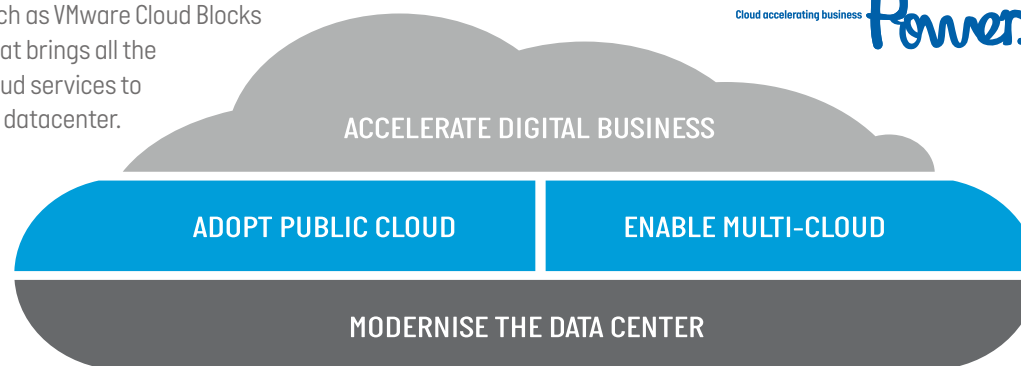

- ENABLE MULTI-CLOUD
  As we seek to find the optimum solution for connecting and securing your hybrid and multi-cloud platform, Intel's Xeon® offers 'security without compromise' and scalable processors to 'rev up your cloud engine'. No matter the scale of your private cloud, we can build the cloud capabilities you need, incorporating Intel solutions, such as VMware Cloud Blocks and Intel Select that brings all the advantages of cloud services to your on-premises datacenter.

- MODERNISE THE DATACENTER
  We modernise legacy datacenters to minimise risk and cost exposure, providing physical, virtual and cloud infrastructure solutions that enable business. We work with Intel to utilise their Select Solutions, Xeon Scalable for IT modernisation and other capabilities to unleash server potential.

With more than 30 years' experience of Intel-powered devices and solutions, Computacenter optimises and integrates the best technology in hybrid IT and cloud solutions to accelerate your business.
